11 DMTF is a not-for-profit association of industry members dedicated to promoting enterprise and systems
12 management and interoperability. Members and non-members may reproduce DMTF specifications and
13 documents, provided that correct attribution is given. As DMTF specifications may be revised from time to
14 time, the particular version and release date should always be noted.

15 Implementation of certain elements of this standard or proposed standard may be subject to third party
16 patent rights, including provisional patent rights (herein "patent rights"). DMTF makes no representations
17 to users of the standard as to the existence of such rights, and is not responsible to recognize, disclose,
18 or identify any or all such third party patent right, owners or claimants, nor for any incomplete or
19 inaccurate identification or disclosure of such rights, owners or claimants. DMTF shall have no liability to
20 any party, in any manner or circumstance, under any legal theory whatsoever, for failure to recognize,
21 disclose, or identify any such third party patent rights, or for such party's reliance on the standard or
22 incorporation thereof in its product, protocols or testing procedures. DMTF shall have no liability to any
23 party implementing such standard, whether such implementation is foreseeable or not, nor to any patent
24 owner or claimant, and shall have no liability or responsibility for costs or losses incurred if a standard is
25 withdrawn or modified after publication, and shall be indemnified and held harmless by any party
26 implementing the standard from any and all claims of infringement by a patent owner for such
27 implementations.

28 For information about patents held by third-parties which have notified the DMTF that, in their opinion,
29 such patent may relate to or impact implementations of DMTF standards, visit
30 <http://www.dmtf.org/about/policies/disclosures.php>.

130

131

Introduction

132 The information in this specification should be sufficient for a provider or consumer of this data to
133 unambiguously identify the classes, properties, methods, and values that shall be instantiated and
134 manipulated to represent and manage a basic computer system and subsystems that are modeled using
135 the DMTF Common Information Model (CIM) core and extended model definitions.

136 The target audience for this specification is implementers who are writing CIM-based providers or
137 consumers of management interfaces that represent the components described in this document.

138

139 Document Conventions

140 Experimental Material

141 Experimental material has yet to receive sufficient review to satisfy the adoption requirements set forth by
142 the DMTF. Experimental material is included in this document as an aid to implementers who are
143 interested in likely future developments. Experimental material may change as implementation
144 experience is gained. It is likely that experimental material will be included in an upcoming revision of the
145 document. Until that time, experimental material is purely informational.

146 The following typographical convention indicates experimental material:

147 EXPERIMENTAL

148 Experimental material appears here.

149 EXPERIMENTAL

150 In places where this typographical convention cannot be used (for example, tables or figures), the
151 "EXPERIMENTAL" label is used alone.

152

Computer System Profile

153 1 Scope

154 The *Computer System Profile* is the autonomous profile that defines the minimum top-level object model
155 needed to define a basic computing platform. This profile is intended to be the base profile for
156 specialization for the modeling of specific types of computer systems such as virtual machines, servers,
157 desktops, and mobile computers. The *Computer System Profile* identifies component profiles for
158 integration of additional management functionality including system configuration, boot control, and other
159 provisioning capabilities.

160 2 Normative References

161 The following referenced documents are indispensable for the application of this document. For dated or
162 versioned references, only the edition cited (including any corrigenda or DMTF update versions) applies.
163 For references without a date or version, the latest published edition of the referenced document
164 (including any corrigenda or DMTF update versions) applies.

207 **3 Terms and Definitions**

208 In this document, some terms have a specific meaning beyond the normal English meaning. Those terms
209 are defined in this clause.

210 The terms "shall" ("required"), "shall not," "should" ("recommended"), "should not" ("not recommended"),
211 "may," "need not" ("not required"), "can" and "cannot" in this document are to be interpreted as described
212 in [ISO/IEC Directives, Part 2](#), Annex H. The terms in parenthesis are alternatives for the preceding term,
213 for use in exceptional cases when the preceding term cannot be used for linguistic reasons. Note that
214 [ISO/IEC Directives, Part 2](#), Annex H specifies additional alternatives. Occurrences of such additional
215 alternatives shall be interpreted in their normal English meaning.

216 The terms "clause," "subclause," "paragraph," and "annex" in this document are to be interpreted as
217 described in [ISO/IEC Directives, Part 2](#), Clause 5.

218 The terms "normative" and "informative" in this document are to be interpreted as described in [ISO/IEC](#)
219 [Directives, Part 2](#), Clause 3. In this document, clauses, subclauses, or annexes labeled "(informative)" do
220 not contain normative content. Notes and examples are always informative elements.

221 For the purposes of this document, the terms defined in [DSP0004](#), [DSP0200](#), [DSP1001](#), and [DSP1033](#)
222 apply to this document.

223 **4 Symbols and Abbreviated Terms**

224 The following abbreviations are used in this document.

225 **4.1**

226 **IP**

227 Internet Protocol

228 **4.2**

229 **SSH**

230 Secure Shell

231 5 Synopsis

232 **Profile Name:** Computer System

233 **Version:** 1.0.1

234 **Organization:** DMTF

235 **CIM Schema Version:** 2.35

236 **Central Class:** CIM_ComputerSystem

237 **Scoping Class:** CIM_ComputerSystem

238 This abstract profile specification shall not be directly implemented; implementations shall be based on a
239 profile specification that specializes the requirements of this profile.

240 The *Computer System Profile* is an autonomous profile that provides the capability to manage a general-
241 purpose computer system. It is an appropriate target for management for clients that are interested in
242 performing management tasks that are common across diverse computing platforms such as virtual
243 machines, servers, and desktop platforms.

244 The Central Class of the *Computer System Profile* shall be CIM_ComputerSystem. The Central Instance
245 shall be an instance of CIM_ComputerSystem. The Scoping Class shall be CIM_ComputerSystem. The
246 Scoping Instance shall be the Central Instance. Table 1 lists profiles upon which this profile has a
247 dependency. The list in Table 1 is not the complete list of profiles that are allowed to be associated with
248 the *Computer System Profile*, as dictated by the requirements of those profiles. Other profiles shall not be
249 prohibited from being associated with or scoped to the ComputerSystem Central Instance of this profile.

250

Software Inventory	DMTF	1.0	Optional	See 7.3.1.
Software Update	DMTF	1.0	Optional	See 7.3.2.
SSH Service	DMTF	1.0	Optional	See 7.6.2.
System Memory	DMTF	1.0	Optional	See 7.2.2.
Telnet Service	DMTF	1.0	Optional	See 7.6.3.

251 6 Description

252 The *Computer System Profile* is an autonomous profile that defines the minimum top-level object model
253 needed to model computer systems and related software. Other profiles add additional management
254 objects to this basic system model to provide system configuration, boot control, and other provisioning

255 capabilities. CIM_ComputerSystem represents the computer system. CIM_TimeService provides the
256 ability to manage the system time.

257 Figure 1 presents the class schema for the *Computer System Profile*. For simplicity, the prefix CIM_ has
258 been removed from the names of the classes.

259

260

Figure 1 – Computer System Profile: Class Diagram

261 7 Implementation

262 The *Computer System Profile* consists of definitions for the classes CIM_ComputerSystem and
263 CIM_TimeService, and their related EnabledLogicalElementCapabilities classes. Other related subsystem
264 classes such as CIM_LogicalDevice, CIM_Collection, and CIM_RecordLog are defined in their respective
265 profiles.

266 Requirements for propagating and formulating certain properties of the *Computer System Profile* classes
267 are discussed in this clause.

268 Methods are described in 8 (“Methods”), and properties are described in 10 (“CIM Elements”).

269 7.1 Computer System

270 The instrumentation shall create an instance of CIM_ComputerSystem to represent the system being
271 modeled.

272 **7.1.1 Identifying a Computer System**

273 Name/Value pairs contained in the CIM_ComputerSystem.OtherIdentifyingInfo and
 274 CIM_ComputerSystem.IdentifyingDescriptions properties should contain values that clients can use to
 275 correlate instances of CIM_ComputerSystem that represent the same underlying real-world system that
 276 the specialization of the *Computer System Profile* has been instrumented to represent. The following
 277 paragraphs detail the requirements when the OtherIdentifyingInfo and IdentifyingDescriptions properties
 278 are implemented.

279 When the OtherIdentifyingInfo property is implemented, the IdentifyingDescriptions property shall be
 280 implemented. The IdentifyingDescriptions property shall be formatted using the following algorithm:

281 < OrgID > : < LocalID >, where < OrgID > and < LocalID > are separated by a colon (:) and
 282 < OrgID > shall include a copyrighted, trademarked, or otherwise unique name that is owned by the
 283 business entity that is creating or defining the value or that is a registered ID assigned to the business
 284 entity by a recognized global authority. In addition, to ensure uniqueness, < OrgID > shall not contain
 285 a colon (:). When using this algorithm, the first colon to appear in the value shall appear between
 286 < OrgID > and < LocalID >. < LocalID > is chosen by the business entity and shall be used uniquely.

287 The values listed in the "IdentifyingDescriptions Value" column of Table 2 should be used as values for
 288 the IdentifyingDescriptions property. Every entry in Table 2 applicable for a given environment should be
 289 specified. An entry in Table 2 shall be used only if the value for the OtherIdentifyingInfo property is
 290 guaranteed to be globally unique across all underlying real-world systems.

291 **Table 2 – Predefined Identifiers for a Computer System**

IdentifyingDescriptions Value	OtherIdentifyingInfo Value
"CIM:GUID"	A globally unique identifier; see 7.1.1.1.
"CIM:MAC"	MAC address for one of the LAN interfaces of the system; see 7.1.1.2.
"CIM:Model:SerialNumber"	Model and serial number of the system; see 7.1.1.3.
"CIM:Tag"	Asset tag of the system; see 7.1.1.4.
"CIM:CorrelatableID"	An opaque identifier; see 7.1.1.5.

292 **7.1.1.1 CIM:GUID**

293 When the IdentifyingDescriptions property contains the value "CIM:GUID", the value of the corresponding
 294 array index of the OtherIdentifyingInfo property shall satisfy the following constraints:

- 295 • The value shall be a globally unique identifier for the system.
- 296 • The value shall match the pattern ("^[0..9A..F]{32}\$").

297 **7.1.1.2 CIM:MAC**

298 When the IdentifyingDescriptions property contains the value "CIM:MAC", the value of the corresponding
 299 array index of the OtherIdentifyingInfo property shall satisfy the following constraints:

- 300 • The value shall be the MAC address for one of the LAN interfaces of the system.
- 301 • The value shall be formatted as 12 contiguous uppercase hex digits (pattern
 302 "^[0123456789ABCDEF]{12}\$").
- 303 • When the [Ethernet Port Profile](#) is implemented, the value shall match the value of the
 304 PermanentAddress property of an instance of CIM_EthernetPort.

305 7.1.1.3 CIM:Model:SerialNumber

306 When the IdentifyingDescriptions property contains the value "CIM:Model:SerialNumber", the value of the
307 corresponding array index of the OtherIdentifyingInfo property shall be of the form < OrgID > : < LocalID >
308 : <Model Number> : <Serial Number>, where < OrgID > and < LocalID > are separated by a colon (:), and
309 where < OrgID > shall include a copyrighted, trademarked, or otherwise unique name that is owned by
310 the business entity that is creating or defining the value or that is a registered ID assigned to the business
311 entity by a recognized global authority. In addition, to ensure uniqueness, < OrgID > shall not contain a
312 colon (:). When using this algorithm, the first colon to appear in the value shall appear between < OrgID >
313 and < LocalID >. <LocalID> is chosen by the business entity and shall be used uniquely. <Model
314 Number> shall be the model number of the system, and <Serial Number> shall be the serial number of
315 the system.

316 7.1.1.4 CIM:Tag

317 An asset tag is a unique identifier assigned to a computer system. Generally this value is assigned by an
318 administrator or a client application.

319 When the IdentifyingDescriptions property contains the value "CIM:Tag", the value of the corresponding
320 array index of the OtherIdentifyingInfo property shall be a uniquely identifying tag of the system. An
321 example is an asset tag.

322 7.1.1.5 CIM:CorrelatableID

323 When the IdentifyingDescriptions property contains the value "CIM:CorrelatableID", the value of the
324 corresponding array index of the OtherIdentifyingInfo property shall contain an opaque ID that can be
325 used to correlate instances of CIM_ComputerSystem across namespace implementations that represent
326 the same underlying real-world system. Underlying instrumentation shall guarantee that this value is the
327 same for any two or more instances of CIM_ComputerSystem that represent the same underlying real-
328 world system.

329 7.1.2 Modifying ElementName Is Supported

330 The CIM_ComputerSystem.ElementName property may support being modified by the ModifyInstance
331 operation. See 8.4.1. This behavior is conditional upon the existence of an instance of
332 CIM_EnabledLogicalElementCapabilities being associated with the CIM_ComputerSystem instance
333 where the CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported property has the value
334 TRUE.

335 This clause describes the CIM elements and behavior requirements when an implementation supports
336 client modification of the CIM_ComputerSystem.ElementName property.

337 7.1.2.1 CIM_EnabledLogicalElementCapabilities

338 An instance of CIM_EnabledLogicalElementCapabilities shall be associated with the
339 CIM_ComputerSystem instance through an instance of CIM_ElementCapabilities.

340 7.1.2.1.1 CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported

341 The ElementNameEditSupported property shall have a value of TRUE when the implementation supports
342 client modification of the CIM_ComputerSystem.ElementName property.

343 7.1.2.1.2 CIM_EnabledLogicalElement.MaxElementNameLen

344 The MaxElementNameLen property shall be implemented.

345 **7.1.3 Modifying ElementName Is Not Supported**

346 This clause describes the CIM elements and behaviors that shall be implemented when the
347 CIM_ComputerSystem.ElementName property does not support being modified by the ModifyInstance
348 operation.

349 **7.1.3.1 CIM_EnabledLogicalElementCapabilities**

350 An instance of CIM_EnabledLogicalElementCapabilities may be associated with the
351 CIM_ComputerSystem instance through an instance of CIM_ElementCapabilities.

352 **7.1.3.1.1 CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported**

353 The ElementNameEditSupported property shall have a value of FALSE when the implementation does
354 not support client modification of the CIM_ComputerSystem.ElementName property.

355 **7.1.3.1.2 CIM_EnabledLogicalElement.MaxElementNameLen**

356 The MaxElementNameLen property may be implemented. The MaxElementNameLen property is
357 irrelevant in this context.

358 **7.1.4 Managing System Time**

359 A system can maintain an internal clock, which provides the system with the current time (for example, to
360 provide time stamps for log entries). The management of the current time of the system may be
361 supported. This behavior is optional. See 8.2 for requirements for the ManageTime() method.

362 **7.1.4.1 Managing System Time Is Supported**

363 If the management of the current time of the system is supported, it should be implemented in
364 conformance with this profile. If the management of the current time of the system is supported in
365 conformance with this profile, the requirements specified in this clause shall be met.

366 An instance of CIM_TimeService shall be associated with the Central Instance through the
367 CIM_HostedService association. The instance of CIM_TimeService shall also be associated with the
368 Central Instance through the CIM_ServiceAffectsElement association. Management of system time is
369 supported when the CIM_TimeService.ManageTime() method is supported for at least one value for the
370 GetRequest parameter.

371 **7.1.4.2 Managing System Time Is Not Supported**

372 When the management of system time is not supported, no instance of CIM_TimeService shall be
373 associated with the Central Instance through the CIM_ServiceAffectsElement association.

374 **7.2 Management of Computer System Components**

375 The following subclauses detail the requirements for management of components of the system.

376 **7.2.1 Instrumentation of Processors**

377 If the processors of the system are instrumented, the instrumentation should be conformant with the [CPU](#)
378 [Profile](#). If the processors of the system are instrumented in conformance with the [CPU Profile](#), the Central
379 Instance of the *Computer System Profile* shall be associated with the Central Instance of the [CPU Profile](#)
380 through the CIM_SystemDevice association.

381 **7.2.2 Instrumentation of System Memory**

382 If the memory of the system is modeled, the [System Memory Profile](#) should be implemented. If the
383 system memory is modeled in conformance with the [System Memory Profile](#), the Central Instance of the

384 *Computer System Profile* shall be associated with the Central Instance of the [System Memory Profile](#)
385 through the CIM_SystemDevice association.

386 **7.2.3 Instrumentation of Sensors**

387 A system can contain one or more sensors that monitor components within the system. If the sensors of
388 the system are instrumented, the instrumentation should be conformant with the [Sensors Profile](#). If the
389 sensors of the system are instrumented in conformance with the [Sensors Profile](#), the Central Instance of
390 the *Computer System Profile* shall be associated with the Central Instance of the [Sensors Profile](#) through
391 the CIM_SystemDevice association.

392 **7.3 Software Asset Management**

393 This clause describes behavioral requirements for the management of software asset information for the
394 system.

395 **7.3.1 Software Inventory Support**

396 The inventory of software installed on or for the system may be modeled. If the inventory of software
397 installed on or for the system is modeled, the [Software Inventory Profile](#) should be implemented. If the
398 inventory of software installed on or for the system is modeled in conformance with the [Software](#)
399 [Inventory Profile](#), at least one instance of CIM_SoftwareIdentity shall be associated with the Central
400 Instance of the *Computer System Profile* through the CIM_InstalledSoftwareIdentity association, or
401 exactly one instance of CIM_SystemSpecificCollection shall be implemented in accordance with the
402 requirements specified in the "Representing Available Software" clause of the [Software Inventory Profile](#)
403 and associated with the Central Instance of the *Computer System Profile* through the
404 CIM_HostedCollection association.

405 **7.3.2 Software Update Support**

406 Management of software updates for the system or components contained in the system may be
407 supported. If the management of software updates for a component installed in the system is supported,
408 the [Software Update Profile](#) should be implemented. If the management of software updates for a
409 component installed in the system is supported in conformance with the [Software Update Profile](#), the
410 instance of a subclass of CIM_ManagedElement that represents the component shall be associated with
411 the Central Instance of the [Software Update Profile](#) through the CIM_ServiceAffectsElement association.

412 If the management of software updates for the system is supported in conformance with the [Software](#)
413 [Update Profile](#), the Central Instance of the *Computer System Profile* shall be associated with the Central
414 Instance of the [Software Update Profile](#) through the CIM_ServiceAffectsElement association.

415 If the system provides the ability to perform software updates for itself or other systems in conformance
416 with the [Software Update Profile](#), the Central Instance of the *Computer System Profile* shall be associated
417 with the Central Instance of the [Software Update Profile](#) through the CIM_HostedService association.

418 **7.4 Network Interface Management**

419 This clause describes the requirements for the management of network interfaces of the system.

420 **7.4.1 Ethernet Interface Management**

421 If the Ethernet interfaces of the system are instrumented, the instrumentation should be conformant with
422 the [Ethernet Port Profile](#). If the Ethernet Interfaces of the system are instrumented in conformance with
423 the [Ethernet Port Profile](#), at least one instance of CIM_EthernetPort shall be associated with the Central
424 Instance of the *Computer System Profile* through the CIM_SystemDevice association.

425 7.4.2 IP Interface Management

426 If the management of one or more IP interfaces of the system is supported, the [IP Interface Profile](#) should
427 be implemented. If the management of one or more IP interfaces of the system is supported in
428 conformance with the [IP Interface Profile](#), the Central Instance of the *Computer System Profile* shall be
429 associated with the Central Instance of the [IP Interface Profile](#) through the CIM_HostedAccessPoint
430 association.

431 If the system provides the optional behavior of managing alternate configurations for the IP interface in
432 conformance with the [IP Interface Profile](#), the instance of CIM_IPConfigurationService specified by the [IP](#)
433 [Interface Profile](#) shall be associated with the Central Instance of the *Computer System Profile* through the
434 CIM_HostedService association.

435 7.4.3 DHCP Client Management

436 If the DHCP client of the system is modeled, the [DHCP Client Profile](#) should be implemented. If the DHCP
437 client of the system is modeled in conformance with the [DHCP Client Profile](#), at least one instance of
438 CIM_DHCPProtocolEndpoint shall be associated with the Central Instance of the *Computer System*
439 *Profile* through the CIM_HostedAccessPoint association.

440 7.4.4 DNS Client Management

441 If the DNS client of the system is modeled, the [DNS Client Profile](#) should be implemented. If the DNS
442 client of the system is modeled in conformance with the [DNS Client Profile](#), at least one instance of
443 CIM_DNSProtocolEndpoint shall be associated with the Central Instance of the *Computer System Profile*
444 through the CIM_HostedAccessPoint association.

445 7.5 Record Logs

446 Error and event information about a system can be recorded in one or more record logs. If a record log
447 that contains information about the system is instrumented, the [Record Log Profile](#) should be
448 implemented. If a record log that contains information about a system is instrumented in conformance
449 with the [Record Log Profile](#), the Central Instance of the *Computer System Profile* shall be associated with
450 the Central Instance of the [Record Log Profile](#) through the CIM_UseOfLog association.

451 7.6 Management of Protocol Services

452 This clause describes behavioral requirements for the management of protocol services hosted on the
453 system.

454 7.6.1 Hosting a CLP Service

455 The system may host one or more CLP services. If the system hosts at least one CLP service, the [CLP](#)
456 [Service Profile](#) should be implemented. If a CLP service that is hosted by the system is modeled in
457 conformance with the [CLP Service Profile](#), the Central Instance of the *Computer System Profile* shall be
458 associated with the Central Instance of the [CLP Service Profile](#) through the CIM_HostedService
459 association.

460 7.6.2 Hosting an SSH Service

461 The system may host one or more SSH services. If the system hosts at least one SSH service, the [SSH](#)
462 [Service Profile](#) should be implemented. If a SSH service that is hosted by the system is modeled in
463 conformance with the [SSH Service Profile](#), the Central Instance of the *Computer System Profile* shall be
464 associated with the Central Instance of the [SSH Service Profile](#) through the CIM_HostedService
465 association.

466 **7.6.3 Hosting a Telnet Service**

467 The system may host one or more telnet services. If the system hosts at least one telnet service, the
468 [Telnet Service Profile](#) should be implemented. If a telnet service that is hosted by the system is modeled
469 in conformance with the [Telnet Service Profile](#), the Central Instance of the *Computer System Profile* shall
470 be associated with the Central Instance of the [Telnet Service Profile](#) through the CIM_HostedService
471 association.

472 **7.7 System Lifecycle Management**

473 The following subclauses detail requirements related to lifecycle management of the system.

474 **7.7.1 System State Management**

475 This clause details the requirements for representing and managing the state of a computer system.

476 **7.7.1.1 Representing Current System State**

477 The current state and last requested state for a computer system may be modeled using the
478 EnabledState and RequestedState properties of CIM_ComputerSystem. This behavior is optional.

479 When modeling system state is supported, the CIM_ComputerSystem.EnabledState property shall have a
480 value corresponding to the current state of the system and shall not have the value 12 (Not Applicable).
481 The CIM_ComputerSystem.RequestedState property shall not have the value 5 (Not Applicable). The
482 system state can change; therefore, the values of the RequestedState and EnabledState properties may
483 still change even when the optional behavior in 7.7.1.2 is not implemented.

484 When modeling system state is not supported, the CIM_ComputerSystem.EnabledState property shall
485 have the value 12 (Not Applicable) and the CIM_ComputerSystem.RequestedState property shall have
486 the value 5 (Not Applicable).

487 **7.7.1.2 Client State Management Is Supported**

488 The EnabledState and RequestedState properties and the RequestStateChange() method of
489 CIM_ComputerSystem are used to perform basic lifecycle and state management of abstract systems.
490 Common lifecycle states and state changes (for example, enable, disable, and reset) can be managed
491 using these CIM elements. Specializations of this profile define semantics for each state and state
492 change specific to the management domain targeted by the specializing profile.

493 When management of the state of a system is supported, exactly one instance of
494 CIM_EnabledLogicalElementCapabilities shall be associated with the CIM_ComputerSystem instance
495 through an instance of CIM_ElementCapabilities.

496 Even when client state management is supported, the values of the RequestedState and EnabledState
497 properties may still change implicitly to reflect state changes and requests that were not initiated by a
498 client of the instrumentation.

499 Support for managing the state of the system is optional behavior. This clause describes the CIM
500 elements and behaviors that shall be implemented when this behavior is supported.

501 **7.7.1.2.1 CIM_EnabledLogicalElementCapabilities**

502 When state management is supported, exactly one instance of CIM_EnabledLogicalElementCapabilities
503 shall be associated with the CIM_ComputerSystem instance through an instance of
504 CIM_ElementCapabilities.

505 **7.7.1.2.1.1 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported**

506 The RequestedStatesSupported property may contain zero or more values.

507 7.7.1.2.2 CIM_ComputerSystem.RequestedState

508 When the CIM_ComputerSystem.RequestStateChange() method is successfully invoked, the value of the
509 RequestedState property shall be the value of the RequestedState parameter. If the method is not
510 successfully invoked, the value of the RequestedState property is indeterminate.

511 The CIM_ComputerSystem.RequestedState property shall have one of the values specified in the
512 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property or a value of 5 (No
513 Change). A value of 5 (No Change) shall indicate that the instrumentation is not aware of a request to
514 change the state of the managed system.

515 7.7.1.2.3 CIM_ComputerSystem.EnabledState

516 When the RequestedState parameter has a value of 2 (Enabled) or 3 (Disabled) and the
517 CIM_ComputerSystem.RequestStateChange() method completes successfully, the value of the
518 EnabledState property may equal the value of the CIM_ComputerSystem.RequestedState property.

519 If the method does not complete successfully, the value of the EnabledState property is indeterminate.

520 7.7.1.3 Client State Management Is Not Supported

521 This clause describes the CIM elements and behaviors that shall be implemented when client state
522 management is not supported.

523 7.7.1.3.1 CIM_EnabledLogicalElementCapabilities

524 When client state management is not supported, exactly one instance of
525 CIM_EnabledLogicalElementCapabilities may be associated with the CIM_ComputerSystem instance
526 through an instance of CIM_ElementCapabilities.

527 7.7.1.3.1.1 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported

528 The CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property shall not contain any
529 values.

530 7.7.2 Boot Control

531 This clause describes the behavioral requirements for modeling and managing the boot process and
532 configuration of the managed system.

533 7.7.2.1 Boot Configuration Management Is Not Supported

534 When management of boot configurations and the boot process is not supported for the system, the
535 managed system may initiate its boot process when it is enabled.

536 7.7.2.2 Boot Configuration Management Is Supported

537 Management of boot configurations and the boot process may be supported for the system. This clause
538 describes the requirements when the management of boot configurations and the boot process is
539 supported.

540 If the instrumentation of the boot configurations and the boot process is supported, the instrumentation
541 should be conformant with the [Boot Control Profile](#). If the instrumentation of the boot configurations and
542 the boot process is in conformance with the [Boot Control Profile](#), the Central Instance of the *Computer
543 System Profile* shall be associated with the Central Instance of the [Boot Control Profile](#) through the
544 CIM_ServiceAffectsElement association.

545 7.7.2.3 Hosting a Boot Service

546 The system may provide the ability to manage the boot configurations and control the boot process of
 547 itself or other systems. If the system provides this ability, the [Boot Control Profile](#) should be implemented.
 548 If the modeling of ability to manage the boot configurations and control the boot process of itself or other
 549 systems is in conformance with the [Boot Control Profile](#), the Central Instance of the *Computer System*
 550 *Profile* shall be associated with the Central Instance of the [Boot Control Profile](#) through the
 551 CIM_HostedService association.

552 7.8 Smash Collections Profile

553 The [SMASH Collections Profile](#) may be implemented. If the [SMASH Collections Profile](#) is implemented,
 554 each instance of CIM_ConcreteCollection defined by the [SMASH Collections Profile](#) shall be associated
 555 with the Central Instance the *Computer System Profile* through the CIM_OwningCollectionElement
 556 association.

557 8 Methods

558 This clause details the requirements for supporting intrinsic operations and extrinsic methods for the CIM
 559 elements defined by this profile.

560 8.1 CIM_ComputerSystem.RequestStateChange()

561 Invoking the CIM_ComputerSystem.RequestStateChange() method changes the element's state to the
 562 value specified in the RequestedState parameter. The values 2 (Enabled) and 3 (Disabled) of the
 563 RequestedState parameter correspond to enabling or disabling the system. A value of 2 (Enabled) shall
 564 correspond to a request to enable the system. A value of 3 (Disabled) shall correspond to a request to
 565 disable the system. A value of 11 (Reset) shall be equivalent to invoking the method with a value of 3
 566 (Disabled), waiting for the operation to complete, and then invoking the method with a value of 2
 567 (Enabled).

568 See clause 7.7.1.2.2 for information about the effect of this method on the RequestedState property.

569 The method shall be considered successful if the (initiated) state of the system upon completion of the
 570 method corresponds to the desired state indicated by the RequestedState parameter. An actual change
 571 in state does not need to occur for the method to be considered successful; the resultant state only needs
 572 to be equal to the requested state. When the method completes successfully, the return value shall be
 573 zero.

574 See clause 7.7.1.2.3 for information about the effect of this method on the EnabledState property.

575 Detailed requirements of the RequestStateChange() method are specified in Table 3 and Table 4.

576 No standard messages are defined.

577 Invoking the CIM_ComputerSystem.RequestStateChange() method multiple times could result in earlier
 578 requests being overwritten or lost.

579 **Table 3 – CIM_ComputerSystem.RequestStateChange() Method: Return Code Values**

Value	Description
0	Request was successfully executed.
1	Method is unsupported in the implementation.
2	Error occurred
0x1000	Job started: REF returned to started CIM_ConcreteJob

580

Table 4 – CIM_ComputerSystem.RequestStateChange() Method: Parameters

Qualifiers	Name	Type	Description/Values
IN, REQ	RequestedState	uint16	Valid state values : 2 (Enabled) 3 (Disabled) 11 (Reset)
OUT	Job	CIM_ConcreteJob REF	Returned if job started
IN, REQ	TimeoutPeriod	datetime	Client specified the maximum amount of time the transition to a new state is supposed to take: 0 or NULL – No time requirements <interval> – Maximum time allowed

581 **8.1.1 CIM_ComputerSystem.RequestStateChange() Conditional Support**

582 When the CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property contains at least
583 one value, the CIM_ComputerSystem.RequestStateChange() method shall be implemented and
584 supported. The CIM_ComputerSystem.RequestStateChange() method shall not return a value of 1 (Not
585 Supported).

586 **8.2 CIM_TimeService.ManageTime()**

587 The CIM_TimeService.ManageTime() method is used to query or modify the system time. When the
588 GetRequest parameter has a value of TRUE, the TimeData parameter shall be ignored. When the
589 ManagedElement parameter is not a reference to the Central Instance, the method shall return a value of
590 2. When the method is not supported for the specified value of GetRequest, the method shall return a
591 value of 2.

592 When the GetRequest parameter is TRUE and the method completes successfully, the value of the
593 TimeData parameter shall be an absolute date-time and shall not be an interval. When the value of the
594 GetRequest parameter is FALSE, and the TimeData parameter is expressed as an interval, the method
595 shall return a value of 2.

596 CIM_TimeService.ManageTime() method's detailed requirements shall be as specified in Table 5 and
597 Table 6.

598 No standard messages are defined for this method.

599 **Table 5 – CIM_TimeService.ManageTime() Method: Return Code Values**

Value	Description
0	Request was successfully executed.
1	Method is not supported in the implementation.
2	Error occurred

600

Table 6 – CIM_TimeService.ManageTime() Method: Parameters

Qualifiers	Name	Type	Description/Values
IN	GetRequest	Boolean	Indicates whether the request is to get (TRUE) or set (FALSE) the time for the specified element
IN / OUT	TimeData	datetime	On input, this is the desired value for the system time. On output, this is the system time.
IN	ManagedElement	CIM_Managed Element	Reference to the Central Instance

601 8.3 Profile Conventions for Operations

602 This profile specification defines operations in terms of [DSP0200](#).

603 For each profile class (including associations), the implementation requirements for operations, including
604 those in the following default list, are specified in class-specific subclauses of this clause.

605 The default list of operations is as follows:

- 606 • Associators()
- 607 • AssociatorNames()
- 608 • EnumerateInstances()
- 609 • EnumerateInstanceNames()
- 610 • GetInstance()
- 611 • References()
- 612 • ReferenceNames()

613 8.4 CIM_ComputerSystem

614 Table 7 lists implementation requirements for operations. If implemented, these operations shall be
615 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 7, all operations in
616 the default list in 8.3 shall be implemented as defined in [DSP0200](#).

617 NOTE: Related profiles may define additional requirements on operations for the profile class.

618

Table 7 – Operations: CIM_ComputerSystem

Operation	Requirement	Messages
ModifyInstance	Optional. See 8.4.1.	None

619 8.4.1 CIM_ComputerSystem — ModifyInstance

620 This clause details the requirements for the ModifyInstance operation applied to an instance of
621 CIM_ComputerSystem. The ModifyInstance operation may be supported.

622 The ModifyInstance operation shall be supported and the CIM_ComputerSystem.ElementName property
623 shall be modifiable when an instance of CIM_EnabledLogicalElementCapabilities is associated with the
624 CIM_ComputerSystem instance and the ElementNameEditSupported property of the
625 CIM_EnabledLogicalElementCapabilities instance associated with the CIM_ComputerSystem instance
626 has a value of TRUE (see 8.4.1.1).

627 **8.4.1.1 CIM_ComputerSystem.ElementName**

628 When an instance of CIM_EnabledLogicalElementCapabilities is associated with the
 629 CIM_ComputerSystem instance and the ElementNameEditSupported property of the
 630 CIM_EnabledLogicalElementCapabilities instance associated with the CIM_ComputerSystem instance
 631 has a value of TRUE, the implementation shall allow the ModifyInstance operation to change the value of
 632 the ElementName property of the CIM_ComputerSystem instance. The ModifyInstance operation shall
 633 enforce the length restriction specified in the MaxElementNameLen property of the
 634 CIM_EnabledLogicalElementCapabilities instance.

635 When an instance of CIM_EnabledLogicalElementCapabilities is associated with the
 636 CIM_ComputerSystem instance and the ElementNameEditSupported property of the
 637 CIM_EnabledLogicalElementCapabilities has a value of FALSE or no instance of
 638 CIM_EnabledLogicalElementCapabilities is associated with the CIM_ComputerSystem instance, the
 639 implementation shall not allow the ModifyInstance operation to change the value of the ElementName
 640 property of the CIM_ComputerSystem instance.

641 **8.5 CIM_ElementCapabilities**

642 Table 8 lists implementation requirements for operations. If implemented, these operations shall be
 643 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 8, all operations in
 644 the default list in 8.3 shall be implemented as defined in [DSP0200](#).

645 NOTE: Related profiles may define additional requirements on operations for the profile class.

646 **Table 8 – Operations: CIM_ElementCapabilities**

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

647 **8.6 CIM_EnabledLogicalElementCapabilities**

648 All operations in the default list in 8.3 shall be implemented as defined in [DSP0200](#).

649 NOTE: Related profiles may define additional requirements on operations for the profile class.

650 **8.7 CIM_HostedService**

651 Table 9 lists implementation requirements for operations. If implemented, these operations shall be
 652 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 9, all operations in
 653 the default list in 8.3 shall be implemented as defined in [DSP0200](#).

654 NOTE: Related profiles may define additional requirements on operations for the profile class.

655

Table 9 – Operations: CIM_HostedService

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

656 8.8 CIM_ServiceAffectsElement

657 Table 10 lists implementation requirements for operations. If implemented, these operations shall be
 658 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 10, all operations
 659 in the default list in 8.3 shall be implemented as defined in [DSP0200](#).

660 NOTE: Related profiles may define additional requirements on operations for the profile class.

661

Table 10 – Operations: CIM_ServiceAffectsElement

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

662 8.9 CIM_TimeService

663 All operations in the default list in 8.3 shall be implemented as defined in [DSP0200](#).

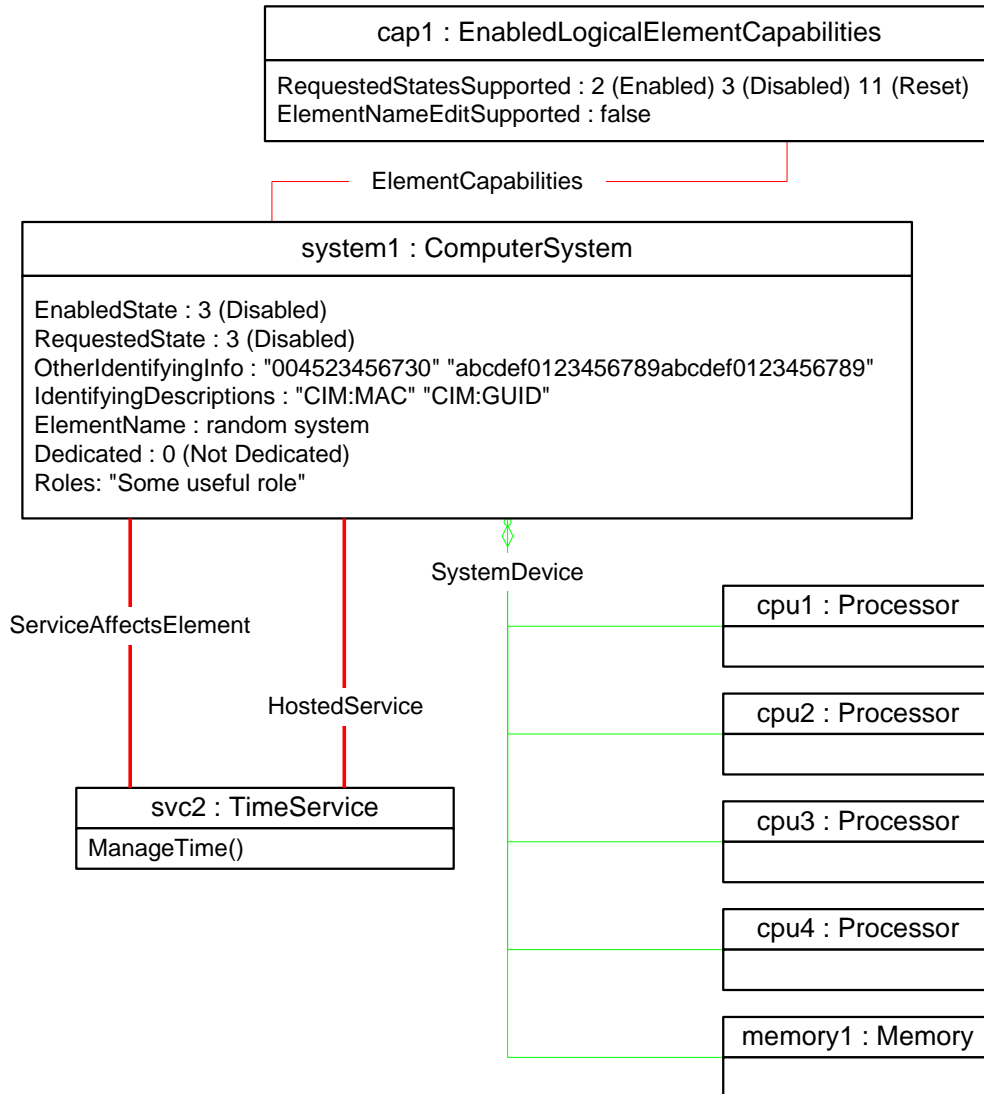

664 NOTE: Related profiles may define additional requirements on operations for the profile class.

665 9 Use Cases

666 The following use cases and object diagrams illustrate use of the *Computer System Profile*. They are for
 667 informational purposes only and do not introduce behavioral requirements for implementations of the
 668 profile.

669 9.1 Object Diagrams

670 The object diagram in Figure 2 shows an abstract system in which the optional state management and
 671 time management behaviors are supported as well as the [CPU Profile](#) and [System Memory Profile](#).

672

673

Figure 2 – Logical Topology

- 699 5) If there is a match, then the instance of CIM_ComputerSystem from step 4) is instrumented for
700 the same real-world system as instance A. For each name/value pair for the instance, if it is not
701 already in the set of identification pairs known by the client for the system, add it to the set.
- 702 6) If a new identification pair was added in step 5), go back to step 4) and retest each instance of
703 CIM_ComputerSystem.

704 9.4 Enable a System

705 A client can enable a system as follows:

- 706 1) Look for an instance of CIM_EnabledLogicalElementCapabilities associated with the target
707 instance through the CIM_ElementCapabilities association.
- 708 2) Verify that the CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property
709 contains the value 2 (Enabled).
- 710 3) Invoke the RequestStateChange() method on the target instance, specifying 2 (Enabled) for the
711 RequestedState parameter.

712 9.5 Disable a System

713 A client can disable a system as follows:

- 714 1) Look for an instance of CIM_EnabledLogicalElementCapabilities associated with the Central
715 Instance through the CIM_ElementCapabilities association.
- 716 2) Verify that the CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property
717 contains the value 3 (Disabled).
- 718 3) Invoke the RequestStateChange() method on the target instance, specifying 3 (Disabled) for
719 the RequestedState parameter.

720 9.6 Reset a System

721 A client can reset a system as follows:

- 722 1) Look for an instance of CIM_EnabledLogicalElementCapabilities associated with the target
723 instance through the CIM_ElementCapabilities association.
- 724 2) Verify that the CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property
725 contains the value 11 (Reset).
- 726 3) Invoke the RequestStateChange() method on the target instance, specifying 11 (Reset) for the
727 RequestedState parameter.

728 9.7 Manage the System Boot Configuration

729 A client can verify that an instance of CIM_RegisteredProfile for the [Boot Control Profile](#) exists using
730 either the central class or scoping class methodology as described in [Profile Registration Profile](#). If it
731 exists, a client can determine whether management of the system boot configuration is supported by
732 searching for an instance of CIM_BootService that is conformant with the [Boot Control Profile](#) and
733 associated with the Central Instance of the *Computer System Profile* through the
734 CIM_ServiceAffectsElement association. The specific use cases for managing the system boot
735 configuration are documented in the [Boot Control Profile](#).

736 9.8 Determine the Number of Processors in the System

737 A client can verify that an instance of CIM_RegisteredProfile for the [CPU Profile](#) exists using either the
738 central class or scoping class methodology as described in [Profile Registration Profile](#). If it exists, then the
739 CPU profile is implemented. When the optional [CPU Profile](#) is implemented, the client can determine the
740 number of processors in the system by querying for instances of CIM_Processor that are conformant with

741 the [CPU Profile](#) and associated with the Central Instance of the *Computer System Profile* through the
742 CIM_SystemDevice association.

743 **9.9 Determine If Time Management Is Supported**

744 To determine if time management is supported, the client can look for an instance of CIM_TimeService
745 associated with the target instance through the CIM_ServiceAffectsElement association.

746 **9.10 Get Time for System**

747 A client can determine the system time by first using the steps in 9.9 to determine if time management is
748 supported and find the associated instance of CIM_TimeService. The client can then invoke the
749 CIM_TimeService.ManageTime() method, specifying a value of TRUE for the value of the GetRequest
750 parameter and a reference to the target instance for the value of the ManagedElement parameter.

751 **9.11 Set Time for System**

752 A client can determine the system time by first using the steps in 9.9 to determine if time management is
753 supported and find the associated instance of CIM_TimeService. The client can then invoke the
754 CIM_TimeService.ManageTime() method, specifying a value of FALSE for the value of the GetRequest
755 parameter, the desired time for the value of the TimeData parameter, and a reference to the target
756 instance for the value of the ManagedElement parameter.

757 **9.12 Determining If ElementName Can Be Modified**

758 For a given instance of CIM_ComputerSystem, a client can determine whether the ElementName
759 property can be modified as follows:

- 760 1) Find the CIM_EnabledLogicalElementCapabilities instance that is associated with the target
761 instance.
- 762 2) If an instance of CIM_EnabledLogicalElementCapabilities is not found, client cannot modify the
763 ElementName property.
- 764 3) Query the value of the ElementNameEditSupported property of the
765 CIM_EnabledLogicalElementCapabilities instance. If the value is TRUE, the client can modify
766 the ElementName property of the target instance.

767 **9.13 Determining If State Management Is Supported**

768 For a given instance of CIM_ComputerSystem, a client can determine whether state management is
769 supported as follows:

- 770 1) Find the CIM_EnabledLogicalElementCapabilities instance that is associated with the target
771 instance.
- 772 2) If an instance of CIM_EnabledLogicalElementCapabilities is not found, state management is not
773 supported.
- 774 3) Query the value of the RequestedStatesSupported property. If at least one value is specified,
775 state management is supported.

776 **10 CIM Elements**

777 Table 11 shows the instances of CIM Elements for this profile. Instances of the CIM elements shall be
 778 implemented as described in Table 11. Clauses 7 (“Implementation”) and 8 (“Methods”) may impose
 779 additional requirements on these elements.

780 **Table 11 – CIM Elements: Computer System Profile**

Element Name	Requirement	Description
Classes		
CIM_ComputerSystem	Mandatory	See 10.1.
CIM_ElementCapabilities	Optional	See 10.2.
CIM_EnabledLogicalElementCapabilities	Optional	See 10.3.
CIM_HostedService	Optional	See 10.4.
CIM_ServiceAffectsElement	Optional	See 10.5.
CIM_TimeService	Optional	See 10.6.
Indications		
None defined in this profile		

781 **10.1 CIM_ComputerSystem**

782 An instance of CIM_ComputerSystem is used to represent the system. Table 12 contains the
 783 requirements for elements of this class.

784 **Table 12 – Class: CIM_ComputerSystem**

Elements	Requirement	Description
Name	Mandatory	Key
CreationClassName	Mandatory	Key
OtherIdentifyingInfo	Optional	See 7.1.1.
IdentifyingDescriptions	Optional	See 7.1.1.
EnabledState	Mandatory	See 7.7.1.
RequestedState	Mandatory	See 7.7.1.2.2.
OperationalStatus	Mandatory	None
HealthState	Mandatory	None
ElementName	Mandatory	See 7.1.2 and 7.1.3.
RequestStateChange()	Conditional	See 8.1.

785 **10.2 CIM_ElementCapabilities**

786 CIM_ElementCapabilities associates an instance of CIM_EnabledLogicalElementCapabilities with an
 787 instance of CIM_ComputerSystem. Table 13 contains the requirements for elements of this class.

788 **Table 13 – Class: CIM_ElementCapabilities**

Elements	Requirement	Notes
ManagedElement	Mandatory	This property shall be a reference to an instance of CIM_ComputerSystem. Cardinality 1..*
Capabilities	Mandatory	This property shall be a reference to the instance of CIM_EnabledLogicalElementCapabilities. Cardinality 0..1

789 **10.3 CIM_EnabledLogicalElementCapabilities**

790 CIM_EnabledLogicalElementCapabilities indicates support for managing the state of the system.
 791 Table 14 contains the requirements for elements of this class.

792 **Table 14 – Class: CIM_EnabledLogicalElementCapabilities**

Elements	Requirement	Notes
InstanceID	Mandatory	Key
RequestedStatesSupported	Mandatory	See 7.7.1.2.1.1 and 7.7.1.3.1.1.
ElementNameEditSupported	Mandatory	See 7.1.2.1.1 and 7.1.3.1.1.
MaxElementNameLen	Conditional	See 7.1.2.1.2 and 7.1.3.1.2.

793 **10.4 CIM_HostedService**

794 CIM_HostedService relates the CIM_TimeService to its scoping CIM_ComputerSystem instance.
 795 Table 15 contains the requirements for elements of this class.

796 **Table 15 – Class: CIM_HostedService**

Elements	Requirement	Notes
Antecedent	Mandatory	This property shall reference the Central Instance. Cardinality 1
Dependent	Mandatory	This property shall reference CIM_TimeService. Cardinality 0..1

797 **10.5 CIM_ServiceAffectsElement**

798 CIM_ServiceAffectsElement associates the CIM_TimeService instance with the Central Instance.
 799 Table 16 contains the requirements for elements of this class.

800 **Table 16 – Class: CIM_ServiceAffectsElement**

Elements	Requirement	Notes
AffectedElement	Mandatory	This property shall be a reference to the Central Instance. Cardinality 1
AffectingElement	Mandatory	This property shall be a reference to an instance of CIM_TimeService. Cardinality 0..1
ElementEffects	Mandatory	Matches 5 (Manages)

801 **10.6 CIM_TimeService**

802 CIM_TimeService manages the current time on the system. Table 17 contains the requirements for
 803 elements of this class.

804 **Table 17 – Class: CIM_TimeService**

Elements	Requirement	Notes
SystemCreationClassName	Mandatory	Key
SystemName	Mandatory	Key
CreationClassName	Mandatory	Key
Name	Mandatory	Key
ElementName	Mandatory	Pattern (“.*”). See clauses 7 and 8.
ManageTime()	Mandatory	See 8.2.

805
806
807
808**ANNEX A
(Informative)****Change Log**

Version	Date	Description
1.0.0	2008-12-08	
1.0.1	2010-04-22	Released as DMTF Standard. This errata release ensures that other profiles can reference the ComputerSystem profile and corrects a wrong association used in a diagram. Experimental Qualifiers have been removed for classes and profiles that have gone Final or been released as DMTF Standard.
1.0.2	2013-01-24	This errata addresses semantics of EnabledState and RequestedState properties. Experimental Qualifiers have been removed for CLP Service Profile and for Software Update Profile, which have gone Final or have been released as DMTF Standard.
